

Imarote Digital TV Solutions SL

IVAN MAROTE

Founder

Providing the best R&D services for Digital TV

Our **mission**

Help TV operators and STB manufacturers to improve the time-to-market for a device.

Our strengths

Accuracy

Detailed requirements acquisition and thorough investigations.

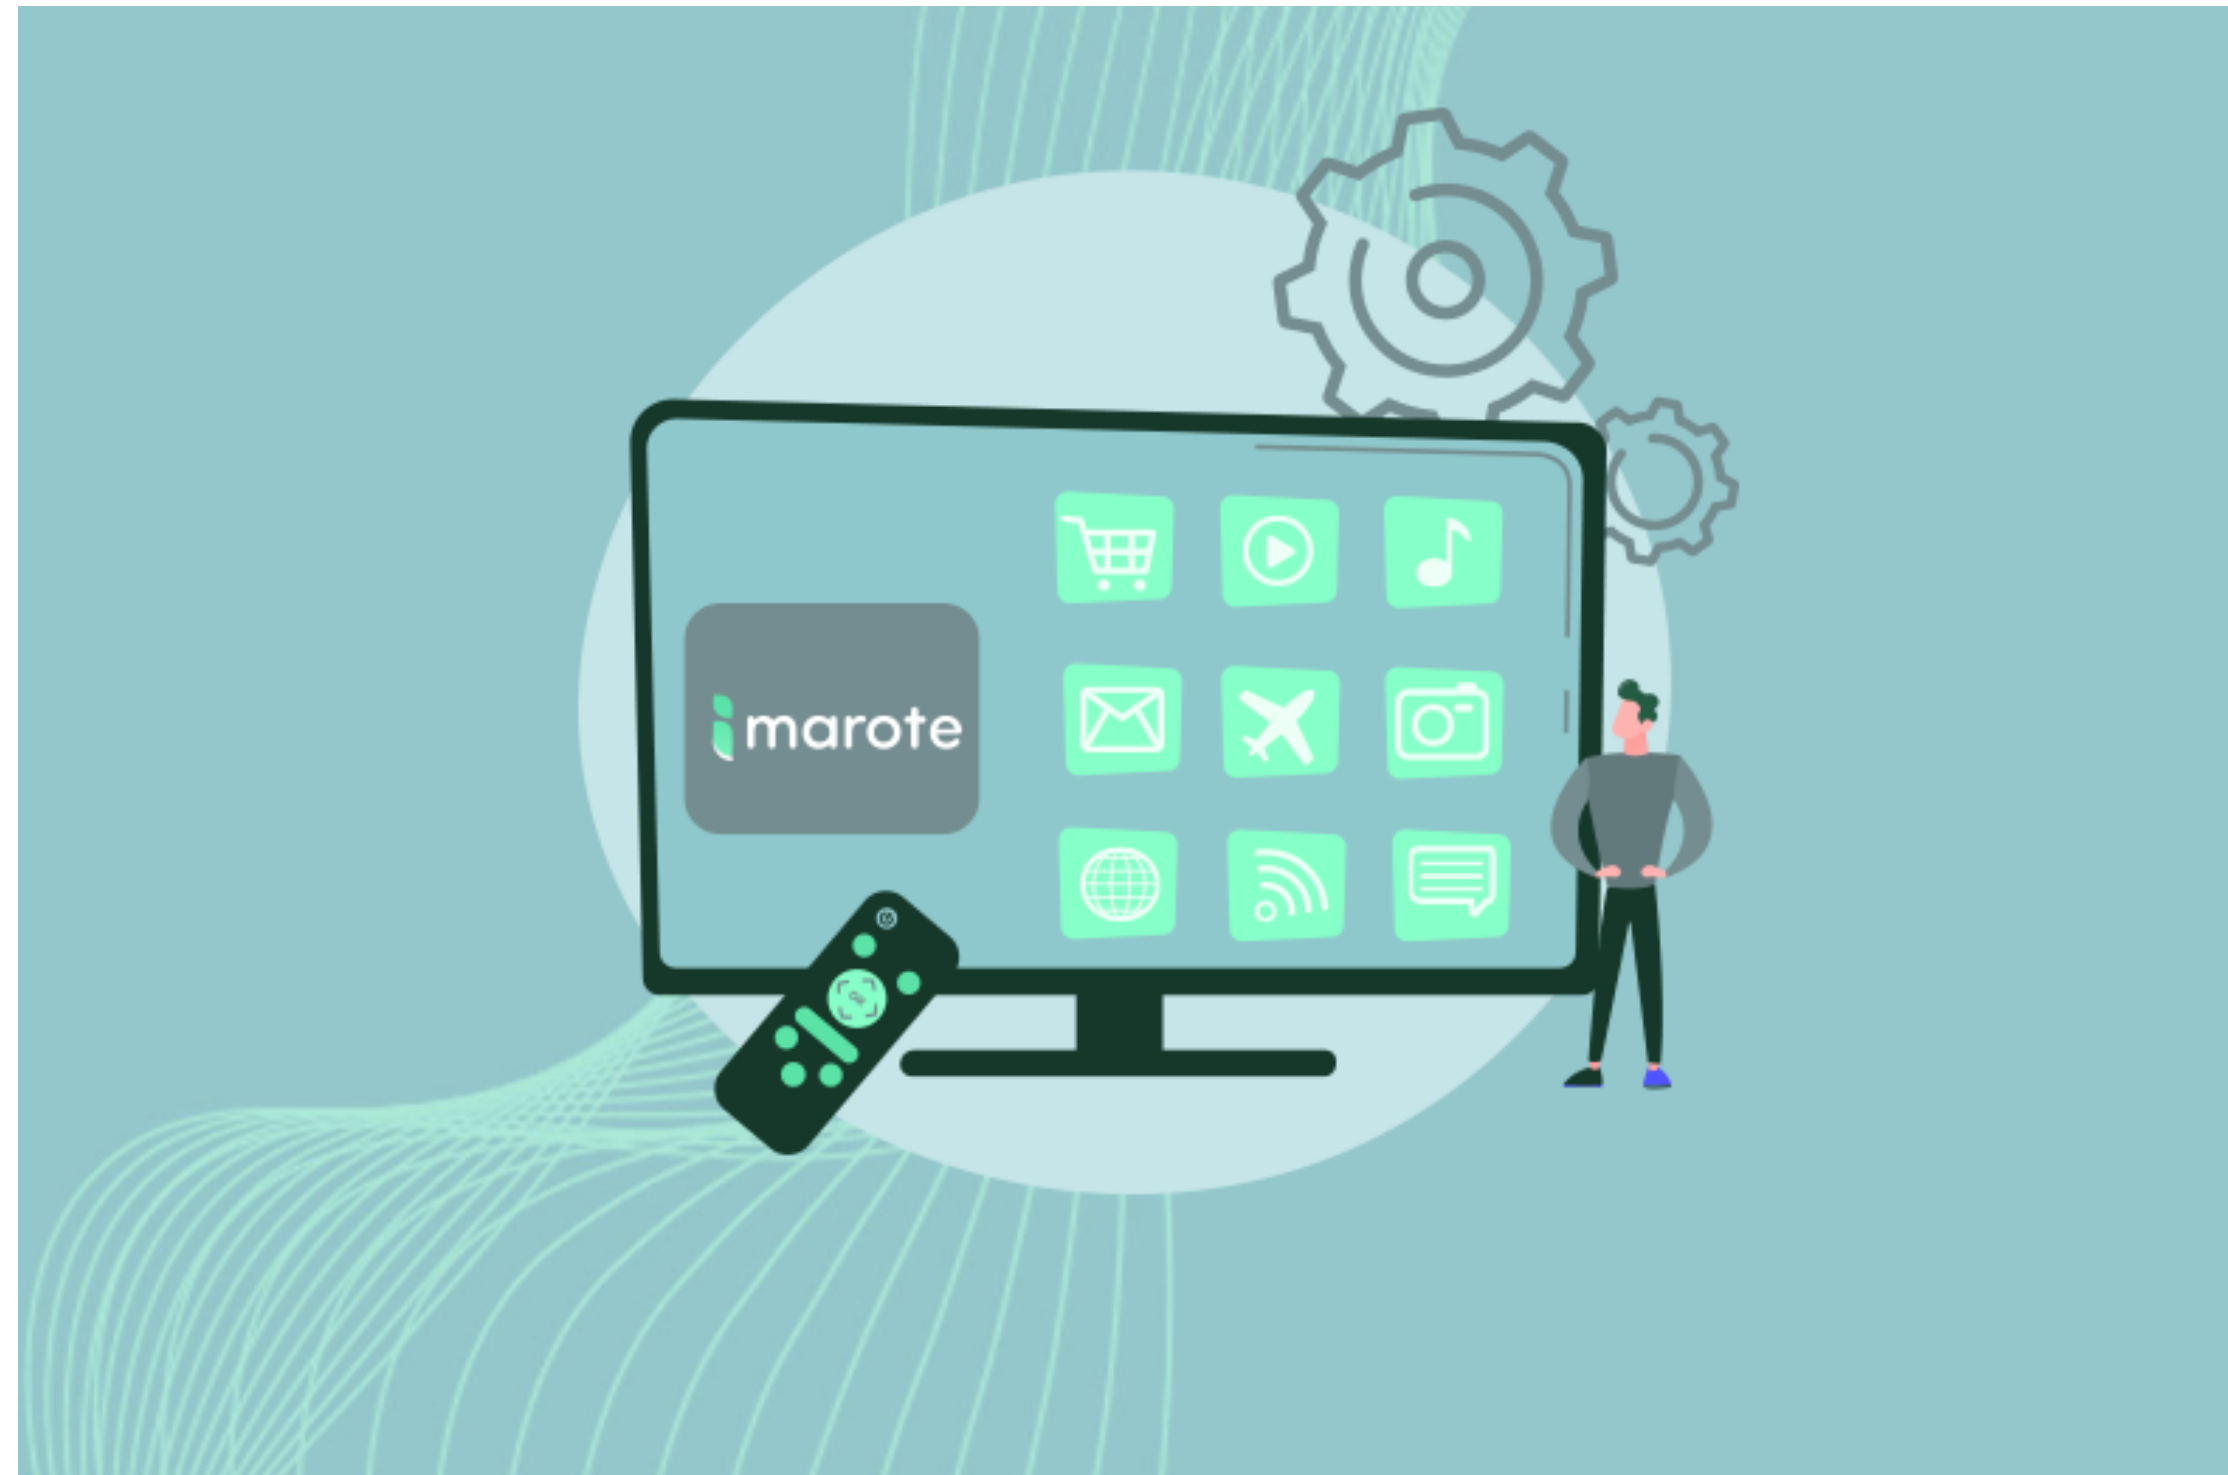

Experience

Extensive knowledge of the sector where we have been working for more than 10 years.

Flexibility

Facilitators in international working environments and mindsets.

How we work?

1

Preparation of requirements

Meetings with the TV operator or client for the preparation and definition of the project requirements (STB, TV, App,...).

2

Transfer of requirements to the manufacturer

Transfer of requirements to the manufacturer's development team and monitoring of their correct implementation.

3

Test

We carry out all the validation tests from the conception of the project to its launch.

4

Monitoring, maintenance and updating

Monitoring and maintenance of the decoder lifecycle, decision making, issue investigation and study of new features.

Our **services**

R&D for TV set-top boxes

- Find the best suitable STB for your scenario.
- Follow-up the whole phase of development, testing and deployment.
- Support you with certifications.

Validation testing (QA)

- We test the operation of both the STB and the apps.
- Carry out all types of QA: functional, integration, regression,...
- In-house scripts for endurance testing.

Issue resolution

- Debug the most problematic issues.
- Interface between call center and operator technical department.
- Ensure customer satisfaction and resolve issues efficiently.

How can we **help you?**

Are you a small operator and want to launch a set-top box for the first time?

We help and guide you through all the steps, from contacts with manufacturers, certifications with Google, Netflix,..., to your field tests.

Already have your device deployed to your clients?

We support you in debugging the most problematic issues, interpreting information from your call center and testing your device to suggest improvements.
